

876. Middle of the Linked List

[Easy](#) [🏷️](#) [Topics](#) [🏢](#) [Companies](#)

Given the `head` of a singly linked list, return *the middle node of the linked list*.

If there are two middle nodes, return **the second middle** node.

Example 1:

Input: `head = [1,2,3,4,5]`
Output: `[3,4,5]`
Explanation: The middle node of the list is node 3.

Example 2:

Input: `head = [1,2,3,4,5,6]`
Output: `[4,5,6]`
Explanation: Since the list has two middle nodes with values 3 and 4, we return the second one.

Constraints:

- The number of nodes in the list is in the range `[1, 100]` .
- `1 <= Node.val <= 100`
