

24. Swap Nodes in Pairs

Medium [🏷️ Topics](#) [🏢 Companies](#)

Given a linked list, swap every two adjacent nodes and return its head. You must solve the problem without modifying the values in the list's nodes (i.e., only nodes themselves should be swapped, not the values they contain).

Example 1:

Input: head = [1,2,3,4]
Output: [2,1,4,3]

Example 2:

Input: head = []
Output: []

Example 3:

Input: head = [1]
Output: [1]

Constraints:

- The number of nodes in the list is in the range $[0, 100]$.
- $0 \leq \text{Node.val} \leq 100$
