

75. Sort Colors

[Medium](#) [🔖 Topics](#) [🏢 Companies](#) [💡 Hint](#)

Given an array `nums` with `n` objects colored red, white, or blue, sort them **in-place** so that objects of the same color are adjacent, with the order: red, white, blue.

We will use the integers `0`, `1`, and `2` to represent the color red, white, and blue, respectively.

You must solve this problem without using the library's sort function.

Example 1:

Input: `nums = [2,0,2,1,1,0]`
Output: `[0,0,1,1,2,2]`

Example 2:

Input: `nums = [2,0,1]`
Output: `[0,1,2]`

Constraints:

- `n == nums.length`
- `1 <= n <= 300`
- `nums[i]` is either `0`, `1`, or `2`.

Follow up: Could you come up with a one-pass algorithm using only constant extra space?
