## 105. Construct Binary Tree from Preorder and Inorder Traversal

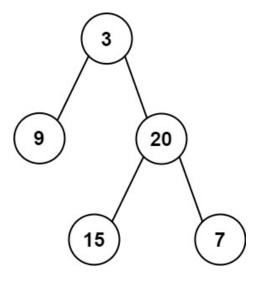

Medium Topics Companies

Given two integer arrays preorder and inorder where preorder is the preorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder is the inorder traversal of a binary tree and inorder traversal of a binary traversal of a binary traversal of a binary traversal of a binary traversal

88

8

## Example 1:

Input: preorder = [3,9,20,15,7], inorder = [9,3,15,20,7]

**Output:** [3,9,20,null,null,15,7]

## Example 2:

Input: preorder = [-1], inorder = [-1]Output: [-1]

## Constraints:

- 1 <= preorder.length <= 3000
- inorder.length == preorder.length
- -3000 <= preorder[i], inorder[i] <= 3000
- preorder and inorder consist of **unique** values.
- Each value of inorder also appears in preorder.
- preorder is **guaranteed** to be the preorder traversal of the tree.
- inorder is **guaranteed** to be the inorder traversal of the tree.
