# 242. Valid Anagram

Easy  Topics  Companies

Given two strings `s` and `t`, return `true` *if* `t` *is an anagram of* `s`*, and* `false` *otherwise.*

An **Anagram** is a word or phrase formed by rearranging the letters of a different word or phrase, typically using all the original letters exact

**Example 1:**

```
Input: s = "anagram", t = "nagaram"
Output: true
```

**Example 2:**

```
Input: s = "rat", t = "car"
Output: false
```

**Constraints:**

- `1 <= s.length, t.length <= 5 * 10`$^4$
- `s` and `t` consist of lowercase English letters.

**Follow up:** What if the inputs contain Unicode characters? How would you adapt your solution to such a case?
